

Red Oaks Primary School

Policy for Supporting Pupils at School with Medical Conditions

Review Date February 2019

Next Review Date February 2020

Introduction

Arrangements are in place at Red Oaks Primary School to support pupils with medical conditions so that these children can access and enjoy the same opportunities at school as any other child. We focus on the needs of each individual child and how their medical condition impacts on their school life including the child's ability to learn, their confidence and the extent to which they can self-care. We work together with the Local Authority, health professionals and other support services to ensure that children with medical conditions receive a full education.

It is intended that school policy and procedures give parents and pupils confidence in the school's ability to provide effective support for medical conditions in school.

Pupils with medical conditions are supported in participating in school trips and visits, or in sporting activities. Teachers must consider how a child's medical condition will impact on their participation. Reasonable adjustments are made so that all children can participate safely according to their own abilities. A risk assessment must be completed, in consultation with the pupil, parents and relevant healthcare professionals, to inform planning arrangements, taking account of any steps needed to ensure that pupils with medical conditions are included.

Admissions

Red Oaks Primary School is a maintained school which serves the community of North Swindon. Admissions are controlled by the Admissions Team at Swindon Borough Council. No child with a medical condition should be denied admission or prevented from taking up a place in school because arrangements for their medical condition have not been made. However, the school does not have to accept a child in school where it would be detrimental to the health of that child or others to do so.

The Head Teacher will contact the school nursing service in the case of any child who has a medical condition that may require support at school, but who has not yet been brought to the attention of the school nurse.

Training

We ensure that sufficient staff have received suitable training and are competent before they take on responsibility to support children with medical conditions. This includes annual whole school awareness training so that all staff are aware of the school's policy for supporting pupils with medical conditions and their role in implementing that policy. New members of staff are made aware of this policy as part of their induction and are included in school training at the earliest opportunity.

The school nurse gives training each year, the content of which is modified according to the needs of children within the pupil population. This includes training re asthma, epilepsy and allergic reactions

Staff are supported in carrying out their role to support pupils with medical conditions through access to advice from the school nurse and by working within an appropriately trained teaching team; teaching staff support each other. For pupils with more unusual or severe medical conditions, advice will be taken from healthcare professionals, the Local Authority and parents in order to ensure that specific training is provided. Any member of school staff providing support to a pupil with medical needs must have had suitable training.

Training is sufficient to ensure that staff are competent and have confidence in their ability to support pupils with medical conditions, and to fulfil the requirements as set out in individual healthcare plans. Training gives staff an understanding of the specific medical conditions they need to deal with, their implications and preventative measures.

Staff must not give prescription medicines or undertake health care procedures without appropriate training. (A first-aid certificate does not constitute appropriate training in supporting children with medical conditions.)

Roles and responsibilities

The Head Teacher has overall responsibility for implementation of this policy and must ensure that;

- sufficient staff are suitably trained
- relevant staff will be made aware of the child's condition,
- someone is always available in cases of staff absence
- supply teachers are briefed
- risk assessments are completed for school visits and other school activities outside of the normal timetable
- individual healthcare plans are monitored by Mrs Michele Tyler
- procedures to be followed when school is notified that a pupil has a medical condition
- transition arrangements are effective
- a pupil is successfully re-integrated after a period of absence.

Supporting a child with a medical condition during school hours is not the sole responsibility of one person. The school works cooperatively with other agencies. Partnership working between school staff, healthcare professionals (and where appropriate, social care professionals), Local Authorities, and parents and pupils is crucial.

All staff are aware of the 'Policy for Supporting Pupils with Medical Conditions' and understand their role in its implementation. The policy is discussed in staff meetings at the beginning of each school year and is displayed in the staff room on a designated board, along with photos and information about pupils with medical conditions. All staff who need to know are aware of the child's condition. A list of pupils with medical conditions is placed in the front of class registers.

At the end of an academic year, transition meetings are held in which the current teacher communicates information about pupils' medical needs to the next class teacher.

Sufficient trained numbers of staff are available to implement the policy and deliver against all individual healthcare plans, including in contingency and emergency situations. Where possible, part time teachers and TA's already employed at Red Oaks Primary School are used to cover classes. If supply staff unfamiliar with the school are used, they are given information about pupils with medical conditions via a list in the front of the register, the staff room medical board and by teachers in partner classes.

Staff are appropriately insured, via Swindon Borough Council, to support pupils with medical conditions. The school has appropriate public liability insurance. Details of the insurance policy number are available in the main office.

Any member of school staff may be asked to provide support to pupils with medical conditions, including the administering of medicines, although they cannot be required to do so. They must, however, take into account the needs of pupils with medical conditions that they teach. School staff receive sufficient and suitable training and achieve the necessary level of competency before taking on responsibility to support children with medical conditions.

School staff know what to do and respond accordingly when they become aware that a pupil with a medical condition needs help. Pupils in the school know that they should inform a teacher immediately if they think help is needed. 'Individual Healthcare Plans' (Care Plans) are kept in the main office. If a child needs to be taken to hospital, a member of staff will stay with the child until the parent arrives, or accompany the child to hospital in an ambulance. Parents' and emergency contact details are kept in the main office. Phones are located in the main office.

Our school has access to school nursing services. The school nurse is responsible for notifying the school when a child has been identified as having a medical condition which will require support in school. Wherever possible, they do this before the child starts at the school. They support staff on implementing a child's individual healthcare plan and provide advice and training. School nurses can liaise with lead clinicians locally on appropriate support for the child and associated staff training needs

Pupils with medical conditions are encouraged to provide information about how their condition affects them. They contribute to the development of, and comply with, their individual healthcare plan.

Parents are required to provide the school with sufficient and up-to-date information about their child's medical needs. They may be the first to notify the school that their child has a medical condition. Parents are key partners and should be involved in the development and review of their child's individual healthcare plan. They must carry out any action they have agreed to as part of its implementation e.g. provide medicines and equipment and ensure they or another nominated adult are contactable at all times.

Individual healthcare plans

Head Teachers have overall responsibility for the development of individual healthcare plans. Individual healthcare plans help to ensure that we effectively support pupils with medical conditions. They provide clarity about what needs to be done, when and by whom. They capture the key information and actions that are required to support the child effectively. Plans are reviewed annually or earlier if evidence is presented that the child's needs have changed.

Not all children with medical conditions will require an individual healthcare plan. In cases where medicine, such as antibiotics, is needed for a short period of time there is no requirement for an individual healthcare plan. Where a child has asthma, and just needs access to an inhaler, details are included on our Asthma Register and there is no individual healthcare plan.

Where a child has SEN but does not have a statement or EHCP, their special educational needs should be mentioned in their individual healthcare plan.

Plans are drawn up in partnership between the school, parents, and a relevant healthcare professional e.g. school, specialist or children's community nurse, who can best advise on the particular needs of the child. See Appendix 1 for further information about the content and format of individual healthcare plans. Pupils should also be involved whenever appropriate. The aim is to capture the steps which a school should take to help the child manage their condition and overcome any potential barriers to getting the most from their education. They are developed with the child's best interests in mind and ensure that the school assesses and manages risks to the child's education, health and social well-being and minimises disruption.

Administering medicine

Medicines can be administered at school when it would be detrimental to a child's health or school attendance not to do so. However, staff will not administer such medications and a parent or person designated by a parent must come into school to administer this.

With written parental permission, staff may administer medication on a class or residential trip.

Non-prescription medicines may not be administered except when children are on a residential trip and it is necessary for supervising teacher to allow a child to take pain killers, hay fever medication or travel sickness medicine. In these cases, medication must have been provided by the parent and a medicine form completed in advance of the residential trip.

After discussion with parents, children who are competent should be encouraged to take responsibility for managing their own medicines and procedures. Appropriate supervision is given. Children can access their medicines for self-medication quickly and easily. Asthma inhalers are kept in the child's class except at break times when they are centrally stored at the first aid point.

If it is not appropriate for a child to self-manage, then relevant staff - those named on the Individual Healthcare Plan or medicine form - help to administer medicines and manage procedures for them. Staff administering medicines do so in accordance with the prescriber's instructions. We keep a record of all medicines administered to individual children, stating what, how and how much was administered, when and by whom. Any side effects of the medication to be administered at school are noted.

All medicines are stored safely, in the main office along with Individual Care Plans, in a fridge or in a designated place in the pupil's classroom. Pupils know that they must ask at the main office for access to medicines. Devices such as asthma inhalers, blood glucose testing meters and adrenaline pens are always readily available to children and not locked away.

Controlled drugs that have been prescribed for a pupil are securely stored in a non-portable container and only named staff should have access. Staff may administer a controlled drug to the child for whom it has been prescribed. Controlled drugs are accessible in an emergency. A record is kept of any doses used and the amount of the controlled drug held in school.

When no longer required, medicines are returned to the parent to arrange for safe disposal. Sharps boxes are used for the disposal of needles and other sharps. These will be taken home.

Complaints

Should parents or pupils be dissatisfied with the support provided for a pupil with a medical condition, they should discuss their concerns directly with the school. If for whatever reason this does not resolve the issue, they may make a formal complaint via the school's complaints procedure. Making a formal complaint to the Department for Education should only occur if it comes within scope of section 496/497 of the Education Act 1996 and after other attempts at resolution have been exhausted.

This policy was established in July 2014 and will be reviewed annually. It is accessible to parents via the school website www.redoaks.org and to school staff electronically via the shared network and on the staff room medical board.

Appendix 1 : Medicine forms. Medicine form A : parental agreement for school to administer medicine on school trips/residentials

The school/setting will not give your child medicine unless you complete and sign this form.

Date for review to be initiated by	
Name of school/setting	
Name of child	
Date of birth	
Group/class/form	
Medical condition or illness	

Medicine

Name/type of medicine <i>(as described on the container)</i>	
Expiry date	
Dosage and method	
Timing	
Special precautions/other instructions	
Are there any side effects that the school/setting needs to know about?	
Self-administration - y/n	
Procedures to take in an emergency	

NB: Medicines must be in the original container as dispensed by the pharmacy

Contact Details

Name	
Daytime telephone no.	
Relationship to child	
Address	
I understand that I must deliver the medicine personally to	[agreed member of staff]

The above information is, to the best of my knowledge, accurate at the time of writing and I give consent to school staff administering medicine in accordance with the school policy. I will inform the school immediately, in writing, if there is any change in dosage or frequency of the medication or if the medicine is stopped.

Appendix 3 : Content and recommended format of individual healthcare plans

When deciding what information should be recorded on individual healthcare plans, the following are considered:

the medical condition, its triggers, signs, symptoms and treatments;

the pupil's resulting needs, including medication (dose, side-effects and storage) and other treatments, time, facilities, equipment, testing, access to food and drink where this is used to manage their condition, dietary requirements and environmental issues eg crowded corridors, travel time between lessons;

specific support for the pupil's educational, social and emotional needs - for example, how absences will be managed, requirements for extra time to complete exams, use of rest periods or additional support in catching up with lessons, counselling sessions;

the level of support needed, (some children will be able to take responsibility for their own health needs), including in emergencies. If a child is self-managing their medication, this should be clearly stated with appropriate arrangements for monitoring;

who will provide this support, their training needs, expectations of their role and confirmation of proficiency to provide support for the child's medical condition from a healthcare professional; and cover arrangements for when they are unavailable;

who in the school needs to be aware of the child's condition and the support required; arrangements for written permission from parents and the headteacher for medication to be administered by a member of staff, or self-administered by the pupil during school hours;

separate arrangements or procedures required for school trips or other

school activities outside of the normal school timetable that will ensure the child can participate, eg risk assessments;

where confidentiality issues are raised by the parent/child, the designated individuals to be entrusted with information about the child's condition; and

what to do in an emergency, including whom to contact, and contingency arrangements. Some children may have an emergency healthcare plan prepared by their lead clinician that could be used to inform development of their individual healthcare plan.

Appendix 4

Asthma awareness for school staff

What to do in an asthma attack

- Keep calm.
- Encourage the child or young person to sit up and slightly forward .
- Make sure the child or young person takes two puffs of reliever inhaler (usually blue) immediately - preferably through a spacer.
- Ensure tight clothing is loosened.
- Reassure the child.
- Ring student services and ask for a first aider to come to the student.

If there is no immediate improvement

- Continue to make sure the child or young person takes one puff of reliever inhaler every minute for five minutes or until their symptoms improve.

•

Call 999 or a doctor urgently if:

- The child or young person's symptoms do not improve in 5-10 minutes.
- The child or young person is too breathless or exhausted to talk.
- The child or young person's lips are blue.
- You are in doubt.

Ensure the child or young person takes one puff of their reliever inhaler every minute until the ambulance or doctor arrives.

It is essential for people who work with children and young people with asthma to know how to recognise the signs of an asthma attack and what to do if they have an asthma attack.

Common signs of an asthma attack are:

- coughing
- shortness of breath
- wheezing
- tightness in the chest
- being unusually quiet
- difficulty speaking in full sentences
- sometimes younger children express feeling
- tight in the chest as a tummy ache.

After a minor asthma attack

- Minor attacks should not interrupt the involvement of a pupil with asthma in school.
- When the pupil feels better they can return to school activities.
- The parents/carers must always be told if their child has had an asthma attack.

Important things to remember in an asthma attack

- Never leave a pupil having an asthma attack.
- If the pupil does not have their inhaler and/or spacer with them, send another teacher or pupil to their classroom or assigned room to get their spare inhaler and/or spacer.
- In an emergency situation school staff are required under common law, duty of care, to act like any reasonably prudent parent.
- Reliever medicine is very safe. During an asthma attack do not worry about a pupil overdosing.
- Send another pupil to get another teacher/adult if an ambulance needs to be called.
- Contact the pupil's parents or carers immediately after calling the ambulance/doctor.
- A member of staff should always accompany a pupil taken to hospital by ambulance
- and stay with them until their parent or carer arrives.

Appendix 5

Epilepsy awareness for school staff

Complex partial seizures - Common symptoms

- The person is not aware of their surroundings or of what they are doing
- Plucking at their clothes
- Smacking their lips
- Swallowing repeatedly
- Wandering around
-

Ring student services and ask for a first aider to come to the student

Call 999 for an ambulance if...

- You know it is the person's first seizure
- The seizure continues for more than five minutes
- The person is injured during the seizure
- You believe the person needs urgent medical attention
-

Do...

- Guide the person from danger
- Stay with the person until recovery is complete
- Be calmly reassuring

Don't...

- Restrain the person
- Act in a way that could frighten them, such as making abrupt movements or shouting at them
- Assume the person is aware of what is happening, or what has happened
- Give the person anything to eat or drink until they are fully recovered
- Attempt to bring them round
- Explain anything that they may have missed
-

Tonic-clonic seizures - Common symptoms

- the person goes stiff,
- loss of consciousness
- falls to the floor

Do...

- Protect the person from injury (remove harmful objects from nearby)
- Cushion their head
- Look for an epilepsy identity card/identity jewellery
- Aid breathing by gently placing the person in the recovery position when the seizure has finished

- Stay with them until recovery is complete
- Be calmly reassuring

Don't...

- Restrain the person's movements
- Put anything in their mouth
- Try to move them unless they are in danger
- Give them anything to eat or drink until they are fully recovered
- Attempt to bring them round

Call 999 for an ambulance if...

- You know it is the person's first seizure
- The seizure continues for more than five minutes
- One seizure follows another without the person regaining consciousness between seizures
- The person is injured
- You believe the person needs urgent medical treatment

Appendix 6

Anaphylaxis awareness for staff

ANAPHYLAXIS

Symptoms of allergic reactions:

Ear/Nose/Throat - Symptoms:

runny or blocked nose, itchy nose, sneezing, painful sinuses, headaches, post nasal drip, loss of sense of smell/taste, sore throat/swollen larynx (voice box), itchy mouth and/or throat and blocked ears.

Eye - Symptoms:

watery, itchy, prickly, red, swollen eyes. Allergic 'shiners' (dark areas under the eyes due to blocked sinuses).

Airway - Symptoms:

wheezy breathing, difficulty in breathing and or coughing (especially at night time).

Digestion:

swollen lips, tongue, itchy tongue, stomach ache, feeling sick, vomiting, constipation and or diarrhoea.

Skin:

Urticaria - wheals or hives-bumpy, itchy raised areas and or rashes.

Eczema -cracked, dry, weepy or broken skin. Red cheeks.

Angiodema - painful swelling of the deep layers of the skin.

Symptoms of Severe Reaction/ Anaphylaxis:

These could include any of the above together with:

- Difficulty in swallowing or speaking.
- Difficulty in breathing -severe asthma
- Swelling of the throat and mouth
- Hives anywhere on the body or generalized flushing of the skin
- Abdominal cramps, nausea and vomiting
- Sudden feeling of weakness (drop in blood pressure)
- Alterations in heart rate (fast Pulse)
- Sense of Impending doom (anxiety/panic)
- Collapse and unconsciousness

TREATMENT

Ring student services and ask for first aider to come to student

Send a student or member of staff to student services to collect 2nd epipen and to ask them to ring for an ambulance and parents.

If student conscious keep them in an upright position to aid breathing. If unconscious then place in recovery position.

If student is conscious and alert ask them to self administer their epipen. If student unconscious, trained member of staff to administer epipen as per training. Record time of giving.

If no improvement within 5 minutes then 2nd epipen to be administered.

Keep used epipens and give to paramedics when they arrive.

Appendix 7

Diabetes awareness and treatment for staff

What is it?

Abnormal fluctuations in blood sugar can lead to someone with diabetes becoming unwell and, if untreated, losing consciousness.

There are two conditions associated with diabetes - hyperglycaemia (high blood sugar) and hypoglycaemia (low blood sugar).

Hypoglycaemia is the more common emergency which affects brain function and can lead to unconsciousness if untreated.

Signs and symptoms:

Hypoglycaemia:

- Hunger
- Feeling 'weak' and confused
- Sweating
- Dry, pale skin
- Shallow breathing

Hyperglycaemia:

- Thirst
- Vomiting
- Fruity/sweet breath
- Rapid, weak pulse

First aid aims

Hypoglycaemia:

- Raise blood sugar level as quickly as possible
- Get casualty to hospital, if necessary

Hyperglycaemia:

- Get casualty to hospital as soon as possible

Treatment

Hypoglycaemia:

- Sit casualty down
- If conscious, give them a sugary drink, chocolate or other sugary food
- If there's an improvement, offer more to eat or drink. Help the casualty to find their glucose testing kit to check their level. Advise them to rest and see their doctor as soon as possible.

- If consciousness is impaired, do not give them anything to eat or drink. Dial 999 for an ambulance

Hyperglycaemia:

Call 999 immediately

Further actions

If the casualty loses consciousness

- Open airway and check breathing
- Place them in recovery position
- Prepare to give resuscitation
